Energy trading training for your technology team

For the people who build and run your desk's systems

A115 Ltd. November 2026.

What we'd like to do for your team

We'd like to teach your developers, data engineers and ETRM support how the desk works: trade capture, positions and P&L, curves, scheduling and settlement, on GB and European power and gas. Jordan Dimov teaches it, using your own trades and systems as the examples, and checks their work himself.

Strong engineers often learn the trade on the job, one incident at a time. A new developer waits months before anyone lets them touch the P&L code. Senior people spend their mornings explaining the same trade. A curve or a settlement run that nobody on the IT side understood turns into an incident. The training is aimed at all three.

Three ways to start

Option	What it includes	Price
Team skills check	A short written check for each person against how the desk works, one live session with the team, and a written note on what to teach first. If you book the team programme within 30 days of that note, the fee comes off the programme price.	£4,850 + VAT per team
Team programme, 6 to 8 weeks	The guides; 3 to 5 live online workshops built on your own trades and systems; practice on our trading simulator (it is being finished now, and every programme will include it); reviews of code and pull requests where the team writes code; support between sessions; and a closing check against the opening one.	£24,500 + VAT for up to 5 people; £2,400 + VAT for each extra person
Every hire, all year	Premium for up to fifteen people: the full course library, the projects and Jordan's code reviews; seats you can reassign when people join or leave; a monthly call with Jordan for the whole team; Slack between calls.	£29,500 + VAT a year for up to 15 people

What the team learns

- How a trade moves through the desk: capture, confirmation, position, P&L, scheduling, settlement and invoicing.
- Curves and valuation, and why the P&L number at 07:30 is what it is.
- The GB and European power and gas markets the desk trades: day-ahead and intraday auctions, balancing, gas hubs.
- Python for commodities: the data, the calculations and the checks a desk relies on.
- For asset owners: how batteries and optimisers trade, so your team can ask the optimiser why it charged when it did and judge the answer.

How you'll know it worked

The skills check at the start and the same check at the end. Alongside it, the things a manager already watches: how long a new engineer takes to make their first approved change to desk code, how many hours senior people spend explaining the desk, and how much rework comes from a misunderstood trade, curve or settlement run.

Who teaches it

Jordan Dimov built trading platforms for the desks at Shell (position and P&L across six desks, EMIR and REMIT reporting), Centrica (market and fundamentals data pipelines) and Limejump (day-ahead trading automation on EPEX SPOT and Nord Pool for the whole floor). He teaches what he had to learn on those desks.

> "Jordan spent a handful of days with us in a combination of group sessions and individual coaching for the development team. Feedback from all of us was great." Jonny G., VP Professional Services, Total Synergy

Buying it

- A one-page scope: the people, the sessions, the dates and the price.
- A VAT invoice from A115 Ltd (company 07726246) after your purchase order, payable in 14 days.
- UK companies pay 20% VAT and reclaim it. EU businesses with a VAT number pay no UK VAT (reverse charge). Businesses elsewhere are outside the scope of UK VAT.
- Delivered online. The materials are for your team's internal use.
- Your data stays with you. We need only names and work email addresses for the seats.
- There is no certificate or accreditation. The proof is the closing check.

If plans change

- Work starts once the invoice is paid.
- Skills check: not refundable once the written checks have been sent.
- Team programme: cancelled more than 20 working days before the first session, refunded less 25%. Cancelled later, or after the programme has started, no refund. You can move the start date once, by written notice at least 10 working days before the first session, to a date within three months. Sessions a participant misses are not repeated.
- Every hire, all year: paid a year in advance, no refund once the seats are open. Seats can be reassigned at any time.
- If we can't deliver a session, we reschedule it at no charge, or refund the part not delivered in full.

How to start

Email contact@a115.co.uk with your company name, the option you'd like and how many people. If you'd like to talk first, say so in the email and we'll suggest a time.
